Moving Markets.

For more than 90 years,
we have been moving markets.

STEINCO castors and wheels are in demand worldwide. Many of our innovations have set new trends, improving the mobility of products across a range of industries and leading to savings in both costs and resources. We are continuing our efforts to ensure that we achieve these aims also in the future.

STEINCO has a new look

STEINCO's new "Castors and Wheels" catalogue has a new modern layout and a variety of useful contents. The first section contains information about our company, its history and our staff. Amongst the new features is a pull-out section with explanations to speed up searches for the items you need. You can use it to search specific castor series as well as a general source of information. The main section is of course dedicated to our products, which include some very interesting innovations. Here you will find additions to our standard products (SERIES 568ff, SERIES 200ff, SERIES 880ff) and new trends relating to zFS locking systems (mechanical central locking) and eFS (electronic locking). Experience for yourself the top quality and special features of our products. Our sales team are happy to provide you with advice and support.

STEINCO – state-of-the-art products and years of experience

Reliable and well-designed castors don't invent themselves. Customers can put their trust in our products because we take care of the essentials:

- modern machinery with automated manufacturing processes
- the latest development software with complementary 3D-prototyping
- test laboratories for confirming all current quality standards and specialized requirements
- manufacturing of our products using high quality materials.

But most importantly, customers have trust in our experienced and highly trained personnel. With their creative ideas, years of acquired expertise and knowledge of the market, our staff are vital in providing the many innovative products that have moved and continue to move the most diverse of markets.

Benefit from our expertise and get in contact. We will be happy to support you in finding products to suit your requirements.

STEINCO innovations.

Product development with systems in mind.

We aspire to offer the very best solutions to meet market demands. This is the driver behind the way we manage innovation. We are in continual dialogue with our customers and know their needs. With the courage to think differently and with knowledge acquired from a range of international projects, we develop products and series that set new standards and bring a new impetus to the market.
STEINCO. We move markets.

► **116**

zFS

Central locking system.
Modular. Flexible. Individual.

The best solution
for multiple requirements.

► **56**

SERIES 840–847.

A new design
for perfect technology.

The proven single wheel plastic castors
in a range of diameters of 75, 100, 125 mm.
Also available in rust-proof versions.

► 61

SERIES 880–889.

Perfected form and function.

Maximum flexibility and outstanding swivel and running properties and a form-locking brake system in 100 and 125 mm diameters.

► 112

eFS**The electronic locking system. One for all.**

The new eFS from STEINCO transfers the braking function into a separate component which, following a modular principle, can now be combined with a number of different castors.

► 100

SERIES 568 / 569.

Proven STEINCO technology with a new look.

The perfect bed series with low design height in three diameters 100, 125, 150 mm.

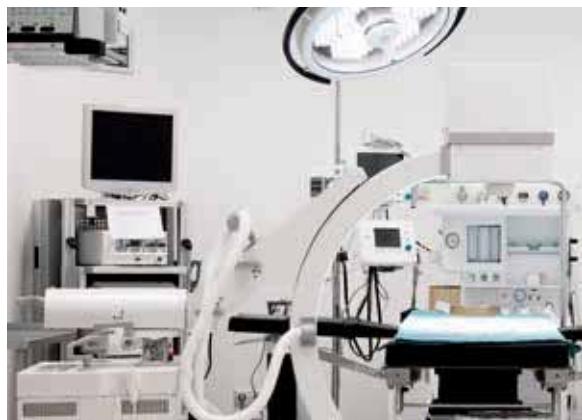

**Always up-to-date.**www.steinco.de/en/news/

Tasks and solutions.

Variable products and systems
for individual requirements.

Continuous dialogue with customers and awareness of their markets mean our design team maintains a deep and practical understanding of your requirements. Together with you, we develop solutions additional to our standard products which take into account the particular characteristics and specific aspects of individual sectors to meet their specific requirements.

STEINCO. We move markets.

Medical technology

Specific castors for stringent hygiene requirements with outstanding rolling and swivel properties and secure, quiet braking performance
Hospital beds // Nursing beds // Anaesthetic- and dialysis machines // Equipment trolleys // Laboratory trolleys // Documentation trolleys // Mobile storage drawers

Commercial kitchens

Rust-proof, hygienic and wash resistant castors also compliant to DIN 18867-8.
Catering trolleys // Waste disposal trolleys // Laundry carts // Tray trolleys // Containers // AGV systems

Store fixtures

Easy to move and robust steel castors and award-winning design castors for high-quality design-store fixture-elements
Mobile store shelves // Projector trolleys // Presentation of goods // Counters // Trade show trolleys // Mobile displays

Factory equipment

Reliable institutional castors made from steel or plastic for all operational applications such as picking and packing or internal logistical tasks.

Parts trolleys // Shelf trolleys // Material trolleys // Commissioning trolleys // Mobile workstations // Service trolleys // Transport trolleys // Mobile operating resources // Workshop trolleys

Aviation

Reduced weight swivel castors with and without central locks as double or single castors
Catering trolleys for aeroplanes and trains

Office/Laboratory equipment

Institutional castors and chair castors with exceptional rolling and swivel properties and with or without load-controlled brakes
Ward trolleys // Mobile sound insulation // Mobile workstations // Apparatus trolleys // IT trolleys

Global credentials and experience.

Trusted internationally with excellent service.

For over 50 years, our castors and wheels have been moving products and devices across the world in hospitals and medical practices, in offices and business premises, in industrial and administrative areas and in commercial kitchens and aeroplanes. Always reliable. Always perfectly adapted to your specific requirements. **STEINCO. We move markets.**

As diverse as your business.

Form and function exactly according to your needs.

We develop and manufacture our standard products according to your individual requirements. From individual colours and combinations matched to your corporate or system design, through to technical details for perfect solutions for individual needs, e.g. improved mobility, high load capacities and harsh environmental conditions, special mountings or special ease of operation, and much more. Contact us. We will be happy to develop castors suited to your specific needs.

STEINCO. Sales and Support: +49 2196 / 943 - 0 | info@steinco.de

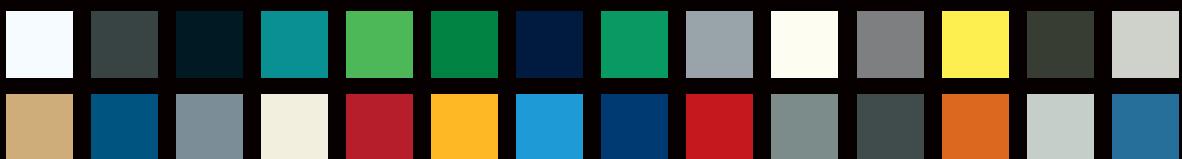

Individual solutions

RAL, NCS, HKS and more.

Besides our standard colours (top row) we provide our castors and wheels in all available RAL or NCS colours as well as any requested colour varieties and combinations to suit your individual needs. We will be happy quote prices for individual castor requirements according to minimum order quantities.

RAL 7004	RAL 7024	RAL 9002	RAL 9011

Speed and quality guaranteed.

We deliver quality products in the time and quantity you require.

As a components supplier, we know that we are part of a tightly connected manufacturing chain. The market can function only through cooperation. We therefore organise production and logistical processes to fully meet the growing demands of the current market place. A sustainable and cooperative approach, which is both ecological and cost-effective, is the basis for ensuring higher efficiency, maximal flexibility and guaranteed delivery to meet increasing demands and requirements.

STEINCO. We move markets.

Our logistics concept delivers on our promise and exceeds customer expectations.

As a medium-sized family-run business we always have the capacity to meet your needs. Our flat hierarchical structures, quick and direct communication, close connection to our partners and their markets, as well as our general delivery and logistics concept always offer the flexibility and capacity that your project needs. In addition to our in-house tool manufacturing and integrated injection moulding we have production and order picking warehouses for dispatch, and buffer stores to facilitate quick responses to practically any order quantity and deadline. Our logistics processes, high-quality and cost-effective global procurement and distributions logistics, as well as our standardised delivery services are core factors in the ongoing success of our partnerships.

And we believe that actions are more important than words. Commitment and reliability, engagement and transparency are important criteria for fruitful cooperation. You can rely on us. Guaranteed.

People make the difference.

For more than 90 years, we have been bringing experience, competence and enthusiasm to projects.

Decades of experience in the manufacture of castors and wheels have made us one of the most sought after manufacturers in this sector. The high quality of our products and services is based on experience, deep market knowledge, and the loyalty, dedication and close cooperation of our staff. Flat hierarchies and direct communications deliver more efficient processes.

STEINCO. We move markets.

Our staff do what they love and love what they do.

Our teams, from purchasing to delivery, are experienced and integrate perfectly with one another. Their expertise sets benchmarks in innovative thinking and first-class execution. Every year we train young employees for technical and commercial occupations. STEINCO has been a family-run business for over 90 years with traditional values such as continuity, responsibility, sustainability and social engagement.

Listening, informing, making and keeping promises.

Community, transparency and partnership belong to our core principles.

Good partnerships require transparency and a readiness to engage in dialogue. Cooperation between all market participants is the basis for forming synergies, and ultimately for successful businesses to create win-win situations. It is always the people with whom and for whom we work who are essential. We therefore have transparent communication with our partners and always provide them with the knowledge and attention that are so important for individual tasks and projects.

STEINCO. At your service.

For us, partnership means jointly setting and achieving common goals.

In addition to standard media for communicating our portfolio, e.g. brochures, the internet and trade fair appearances, we fully inform partners about our product range and our company.

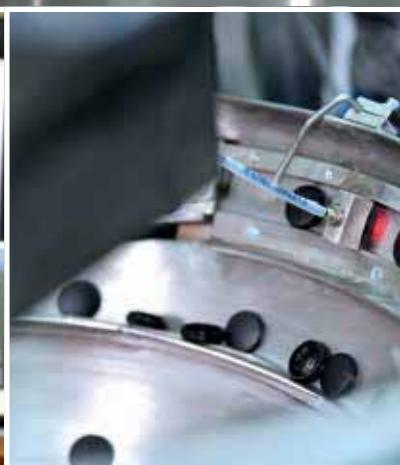

In training sessions and seminars for partners and staff, you gain first-hand experience of our products and technologies. Our current catalogue is one of the key publications in this mix. On our website you will find all the information you're looking for and we send you CAD files about our castors on request. Multiple data sheets and non-verbal assembly instructions provide you with helpful tools for routine use. Last but not least, you can find informative discussion about STEINCO and its products in our various social media portals. If you would like any further information or advice, we look forward to hearing from you at any time at:

State-of-the-art.

High-tech paths to efficiency, functionality and precision.

Our clients and markets expect innovative ideas and exceptional product solutions. This requires state-of-the-art management of products and quality. Following intensive consultation, we have installed a management system based on the needs of everyday business. The system is certified to the standards DIN EN ISO 9001:2015 and DIN EN ISO 14001:2015.

STEINCO. We move markets.

Quality is what helps our customers to move forward.

The vast experience of our engineering team is supported by the latest development software, in-house prototyping capabilities and test laboratory for evaluation (as specified by DIN EN 12530). Our modern manufacturing facilities, production control and quality assurance guarantee our quality standards over the long term. In-house expertise in metal stamping, machining, plastic injection moulding and the final assembly of components is fundamental in our corporate approach. Thanks to these vital skills, we can always respond quickly to your needs.

SERIES 558/559

Form and Function.

The highest expectations on practical design.

For us, design and quality mean perfection for the customer and flawless functionality. Finding the right form is the foundation of reliable functionality – and vice versa. Our engineers are therefore also designers, satisfied only with products that possess exceptional form and an inspirational functionality. **STEINCO. We move markets.**

Good design is always about form and function, aesthetics, technology and utility.

We set down the high expectations we have on the formal and functional quality of our products. We ensure delivery in the promised quality including stringent certification and integrated quality management.

We place as much importance on certification as we do on the frequent accolades we receive for our product design, while we strive to be among the very best in both.

Which castor is right for you?

Criteria for choosing your castors.

Dynamic load bearing capacity

Manoeuvrability

Starting and rolling properties

Load capacities indicated in this catalogue are determined in accordance with European standards EN 12527 to 12531. For safety reasons, we strongly recommend calculating the weight of your mobile equipment including load, and divide the total by three. For safety reasons, three wheels must also be able to carry your goods when one wheel loses contact to the floor.

The right combination of wheel diameter, tyre material and bearing configuration are all factors that affect manoeuvrability. In general, larger diameter wheels will roll and manage obstacles, e.g. a thresholds, more easily than smaller wheels. We recommend softer tyre materials for hard floors and harder tyres should be selected for soft or carpeted floors. The type of wheel bearing has significant influence on mobility. We recommend ball bearings as first choice.

Starting resistance occurs when a swivel castor has to be brought into the direction of travel and its wheel brought into motion. This is influenced by load, wheel diameter, tyre material, type of bearings and, finally, floor conditions. A twin wheel castor is advantageous if high load capacities are required. All of these factors need to be weighed up. We are happy to help you in selecting the appropriate product.

Further information

You can find further information about these criteria and assistance in choosing the right castor

 Email: info@steinco.de

Environmental factors and conditions

Corrosion resistance: By using high quality synthetic materials and zinc-plated steel parts, our products already offer a degree of protection against corrosion. Temperature changes, humidity and certain cleaning agents, for example, may influence corrosion. For such areas of application, we offer fully non-corrosive and machine washable castors. When choosing your castors, please clearly indicate the area of application.

Conductivity and contact discolouration: Our electrical conductive castors provide dissipation resistance lower than 10,000 ohms. This protects against potential produced by friction which would be unable to discharge until the next earth contact.

Contact discolouration is also avoided as much as possible by our use of high quality materials. The use of chemicals (e.g. certain cleaning products) or the choice of certain floor coverings can in certain circumstances lead to contact discolouration.

Temperature effects: Extremes of temperature can potentially damage the materials we use in our products. Please contact us to determine a suitable product for your application.

Chemical resistance

The chemical resistance of castors and wheels depends upon a variety of factors, including mechanical, chemical and thermal stresses.

The chemical resistance chart on page 136 of this catalogue provides basic guidelines. Users should, however, still make the necessary checks for special applications. The data provided does not represent guaranteed product features.

Your castors

Detailed technical data and further information can be found from > page 132

Castor types.

The optimal castor for every application.

Castors keep the world turning. For every mobility need, the optimal castor type exists. Our comprehensive product range therefore has specific castors for the most diverse tasks and areas. Each of these castors has unique advantages and capabilities making it the ideal solution for a given task. And if our diverse range of standard products doesn't offer you an optimal solution, we are happy to develop individual product solutions for your specific requirements.

Just contact us.

Swivel castors

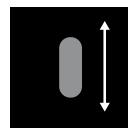

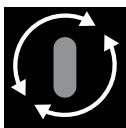

Our swivel castors are an all-rounder for all uses from mobile shelves to hospital beds. The mobile and smooth running castors keep even large and heavy equipment safely and securely on track. Our castors are available in high quality synthetic material or in (rust-proof) steel that is electrically conductive, rust-proof and machine washable.

Double swivel castor

The twin swivel castor offers higher load bearing capacity and mobility. Since its wheels can move in contrary directions, the twin swivel castor can rotate on the spot. It remains nimble and flexible even when bearing an extremely heavy load. The perfect castor for all devices, apparatus and furniture. With our locking technology, you can choose between directional and total locks – and as central locking on request.

Rigid castor

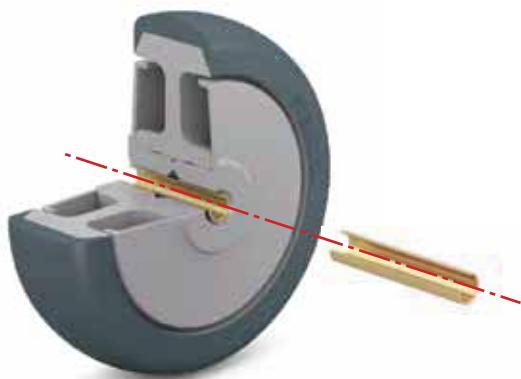

Rigid castors are developed for stable, straight line movement. They are distinctive by being able to run smoothly even at high speed. Our rigid castors are always part of series with compatible swivel castors. The combination of swivel and rigid castors is an appropriately economical solution to gain manoeuvrability in all types of equipment, trolleys and apparatus.

Wheel bearings.

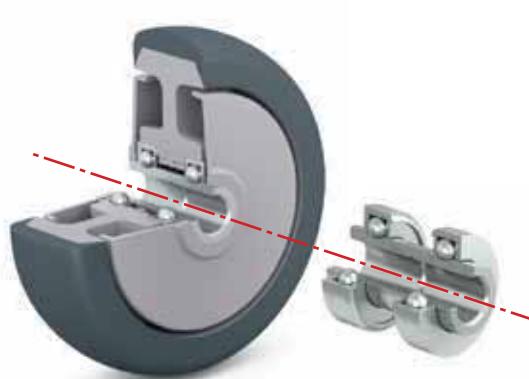

It's the bearing which first gets the castor rolling.

The quality smooth running and load bearing capacity of the wheels essentially depends upon the wheel bearings. Our plain bearing and precision-ball bearing made according to DIN standards give our castors and wheels the security and assurance you expect for your mobile equipment.

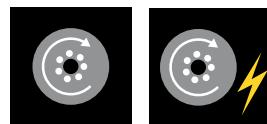

Plain bearing

The simple and cost-effective wheel bearing for lower speeds and short distances. Our plain bearings are durable, insensitive to impacts, practically maintenance free and reliable.

Precision ball bearings

Our high quality precision grooved ball bearings ensure a high degree of smoothness, load bearing capacity and longevity as well as minimal rolling resistance even with heavy loads.

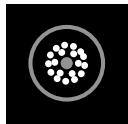

Swivel bearing.

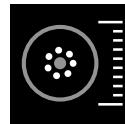

Ball bearing, two-rowed

The assembled, stable and two-rowed ball bearing is an economical ball bearing solution for swivel bearings in institutional castors. These bearings feature a high level of longevity and stability.

Precision ball bearings

The smooth-running precision ball bearings optimise steering and manoeuvrability under high loads and on uneven surfaces.

Mountings.

Stable connections for flexible mobility.

Our diverse range of mountings maintain secure connections between your equipment and our castors. Our mountings are customised to suit the requirements of your equipment. It is often the choice of this connection that determines the quality and functionality of your product. Our fixing elements are optimally adjusted to standard equipment and can be quickly and easily mounted. It is thereby essential that the castor is fastened flush with the equipment in order to achieve maximum load bearing capacity.

Bolt hole

The castor is fastened to the device through the bolt hole with a connecting element e.g. a screw. The choice of connection influences the load capacity.

Thread

The thread is adjusted to a threaded or cylindrical hole in the equipment's attachment point and either screwed or inserted and fastened with a nut. Both the length and the thread can be adapted according to your requirements.

There are three kinds of thread fastening: the set screw, the threaded bold with lock nut, and the inserted hexagonal socket screw.

Mounting plate

Plate fixings are especially stable thanks to their large contact area and four attachment points. The robust and easy to mount fixture is able to securely combine a high load capacity with considerable mobility. You can find top plate dimensions on pages 130-131.

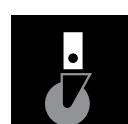

**Friction Ring stem**

The bolt is inserted precisely into the corresponding opening of the equipment or the matching adapter. The integrated friction ring prevents detachment.

**Plain stem with transverse bore**

For secure attachment to equipment using a stable transverse screw connection (for matching adapter sleeves see page 128)

**Plain stems for central locking**

The locking mechanism is activated by a hexagon excenter function and only available for central locking castors.

**Expansion sleeves**

The expansion sleeve is mounted only on the 10 mm bolt hole version. The expansion sleeve reduces the load capacity of the castors. Please contact us if you have any questions. Further information is available on page 129.

Locks.

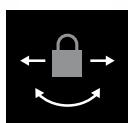

Security and stability in a single step.

The stability, precision and security of the locks is just as important as the frictionless mobility of the castors. The choice between total lock, wheel brake, and directional lock depends on the way your equipment is used. With specialised technologies such as central locking, dual locking, or our central locking system (zFS), we provide you with options to fully meet your requirements. We can also find customised solutions. **Just contact us.**

Total lock

Simultaneously locks the wheel and swivel in any position when equipment is stationary.

Wheel brake

Locks the wheel only to prevent rolling.

**Directional lock**

Locks the swivel mechanism for straight-line tracking when equipment is moved long distances.

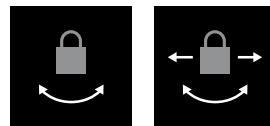

**Central operating lock**

With this system, you can control the total locking and directional locking functions of the castors.

**Dual function castors**

This concept provides both total locking and directional locking functions in an individual castor:

- Directional lock
- Neutral position
- Total lock

The eFS (electronic locking system) can be found on page 112.
The ZFS system (central locking system) on page 116.

Cable guard.

Cable. Hoses. Nothing to hold you back.

Cables and hoses are often present on the floor in medical environments, which can cause problems with mobile equipment. We offer a choice of solutions from a single cable guard to our unique double-sided rotating cable pushing device

Single- and double-sided cable guards

In rooms with multiple cables, e.g. operating theatres, the cable guards push the cables aside to prevent them being run over. The single-sided guard does this when moving forwards, the double-sided guard when moving forwards or backwards.

Single-sided cable guard:

for SERIES550 – SERIES559 and

double-sided guard:

for SERIES568 – SERIES569

Double sided cable guard

The optional cable deflector is mounted on both sides of a twin-wheel castor and significantly eases backwards and forwards manoeuvring in rooms with loose-lying cables.

**Suitable for SERIES550 / 559
in 125 mm**

Double brake pedal.

Safety from all sides.

SERIES 551D

> Seite 70

Double brake pedal

A second brake pedal enables simple locking of the castor in almost any position.

Available in 125 mm only

Integrated ramp feature

Ramp option

... to assist castor over small obstacles.

When equipment is used on irregular floor surfaces, or needs to be moved over thresholds, an integrated ramp mounted on the bottom of the castor can ease the transition.

Technical features.

To turn a product into a solution, the devil's in the detail.

High load bearing capacity and manoeuvrability, outstanding swivel and rolling properties, functionality and precision. The features of our wheels and castors are as diverse as your needs. But as a STEINCO customer, you can expect more: with innovative ideas and sophisticated features, we set the benchmark. Well-chosen materials which are highly resistant against corrosion, chemicals and temperatures enable us to create compelling product solutions perfectly aligned to your individual requirements.

SERIE 880–889

> Page 61

Brake system

A low-noise and smooth, interlocking brake system with outstanding brake function, even on dirty or oily floors

Housings and coverings

Shock absorbing housing, easy and efficient cleaning through a compact design, and customised colour variants and combinations are all possible

Locks

Modular brake pedals, retrofittable on a swivel castor, capable of simple conversion from wheel lock to directional lock

**Electrically conductive**

Optimal for medical uses where electrostatic discharge must be prevented

**Wheels and wheel bearings**

Excellent running and swivel properties due to the precision ball bearing in both the swivel and wheel bearings

Pressed steel castors.

Single wheel castors/twin wheel

At STEINCO, we have decades of experience in pressed steel castors and offer you complete series of single wheel and twin wheel castors in diameters ranging from 50-150 mm suitable for almost any purpose.

Our pressed steel castors are available as swivel castors or rigid castors in a robust pressed steel casing, either zinc-plated or rust proof. Alongside a wide variety of fittings and special mountings, individual solutions according to your requirements are always an option. **Just contact us.**

SERIES 316

> Page 43

Product benefits

- Complete series for almost any purpose
- Robust pressed steel casing – rust-proof also available.
- A wide variety of fittings and special fixtures are possible
- With wheel, direction or total lock
- In-house manufacturing with high-level vertical integration

Series: **315, 316**

SERIES 315

Swivel castor

Technical specifications

- pressed steel casing, zinc plated
- double ball bearing swivel
- non-marking, black polyamide wheel or non-marking, grey thermoplastic rubber tyres (TPE)
- screwed axle

Available options / equipment

- Expansion sleeve mounting (page 129) and other mounting options
- Polyurethane tyres (TPU)
- stainless steel (\varnothing 50 and \varnothing 75 mm)

also available as rigid castor – SERIES 670

Series: 315, **316**

SERIES316

Swivel castor

with total lock or wheel lock

Technical specifications

- pressed steel casing, zinc plated
- double ball bearing swivel
- wheel lock (\varnothing 50 mm)
- total lock ($> \varnothing$ 50 mm)
- non-marking, black polyamide wheel or non-marking, grey thermoplastic rubber tyres (TPU)
- screwed axle

Available options / equipment

- Expansion sleeve mounting (page 129) and other mounting options
- wheel lock (\varnothing 75 mm)
- Polyurethane tyres (TPU)
- stainless steel (\varnothing 50 and \varnothing 75 mm)

also available as rigid castor – SERIES670

Description of symbols on pages 24-25, as well as on fold-out page.
For sleeve, plate and plain stem dimensions, see pages 128-131.

Series: 335, 336, **337**

SERIES337

Swivel castor
with directional lock

**Technical specifications**

- pressed steel casing, zinc plated
- double ball bearing swivel
- Brake pedal, black
- non-marking, grey thermoplastic rubber tyres (TPE)

Available options / equipment

- expansion sleeve mounting (page 129) and other mounting options
- Polyurethane tyres (TPU)

By using a plain stem or screw fitting the castor has to be aligned in travel direction. We recommend a plate fitting. Please contact STEINCO.

Design castors.

Single wheel castors.

Design castors from STEINCO are recognisable by their high flexibility and exceptional product quality. Equipped with tried and tested as well as innovative functions – such as the enclosed housing and unbeatable manoeuvrability – they are ideally suited for all standard uses, e.g. for nursing beds.

The latest development from STEINCO is the SERIES**880/881**.

As usual, this single wheel castor series is packed with innovations, e.g. a completely new assembly concept, a unique brake system and award-winning design.

reddot design award

A variety of colours and colour combinations are possible

Interlocking brake system with incredible braking power

Assembly key

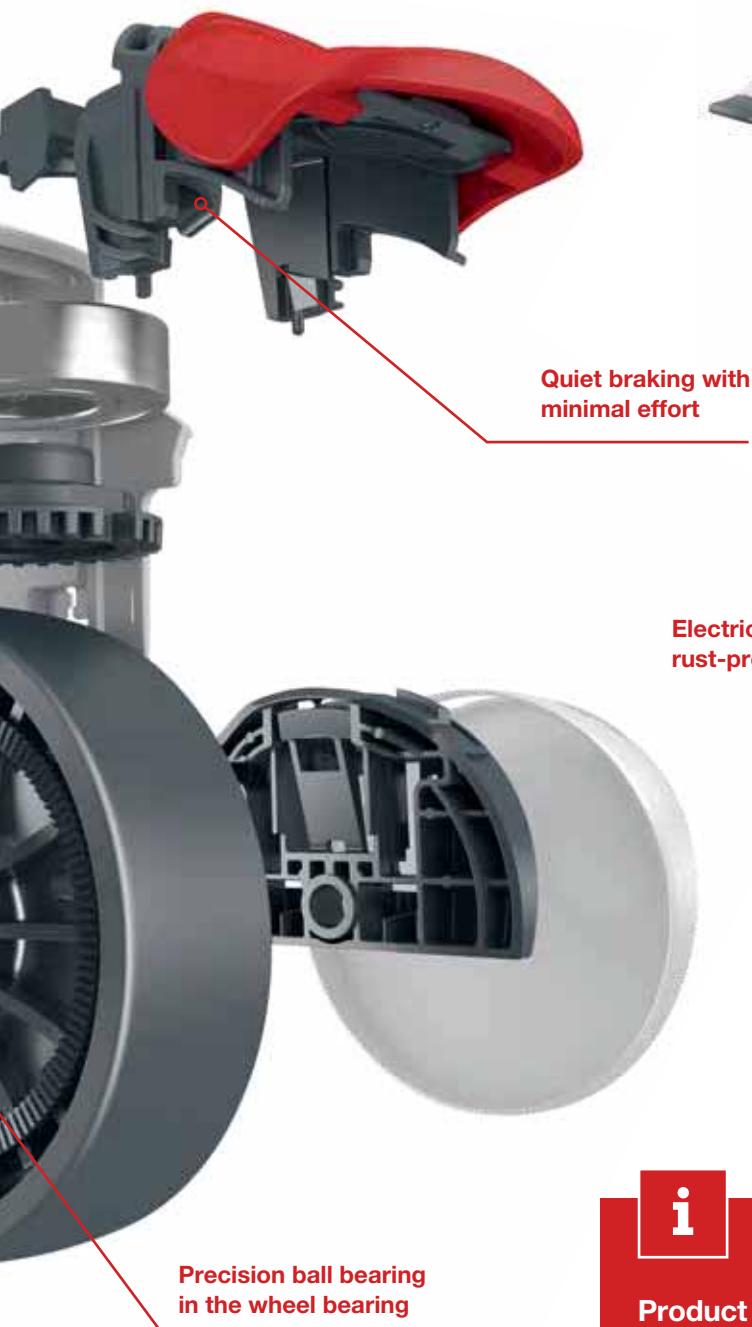

Hexagonal socket screw for the simple and safe assembly (or disassembly) of the SERIES**840/841** and **880/881**. It is provided to suit the mountings M10 (WZAB0) and M12 (WZAE0).

Swivel bearing with precision ball bearing

SERIES880

> Page 61

SERIES840/841

> Page 56/57

A new design for perfect technology.

Reliable single wheel design castors – with updated optics and technology. Now also available in diameters 75, 100 and 125 mm with improved features. Naturally also available in a rust-proof version.

Electrically conducting and rust-proof options available

i

Product benefits SERIE880

- High-quality castors with award-winning design
- Outstanding swivel and running properties
- Interlocking brake system
- Individualised colour combinations possible
- Flexible product series with modular construction
- Rust-proof and electrically conducting versions

Series: **840**, 841, 842, 844, 847

SERIES840

Swivel castor

Technical specifications

- Polyamid casing
 - combined plain ball bearing swivel (\varnothing 75 mm)
 - double ball bearing swivel (\varnothing 100 and \varnothing 125 mm)
 - non-marking, grey thermoplastic rubber tyres (TPE)
 - riveted axle
 - Mounting for wheel diameter 75 mm is added unassembled

Available options / equipment

- expansion sleeve mounting (page 129) and other mounting options
 - Polyurethane tyres (TPU)
 - further RAL colours (minimum order quantity required)
 - stainless steel version SERIES**840R** (page 84)
 - matching assembly wrench available (page 54)

Series: 840, 841, **842**, 844, 847

SERIES 842

Swivel castor
with directional lock

RAL
7004

Technical specifications

- Polyamid casing
- double ball bearing swivel
- non-marking, grey thermoplastic rubber tyres (TPE)
- riveted axle

Available options / equipment

- other mounting options
- Polyurethane tyres (TPU)
- further RAL colours (minimum order quantity required)
- stainless steel version
- matching assembly wrench available (page 54)

By using a plain stem or screw fitting the castor has to be aligned in travel direction. We recommend a plate fitting.
Please contact STEINCO.

SERIES 847

Swivel castor

with dual lock
(total and directional lock)

RAL 7004

Technical specifications

- Polyamid casing
- double ball bearing swivel
- non-marking, grey thermoplastic rubber tyres (TPE)
- riveted axle

Available options / equipment

- other mounting options
- Polyurethane tyres (TPU)
- further RAL colours (minimum order quantity required)
- stainless steel version
- matching assembly wrench available (page 54)

The swivel castor combines total and directional lock. This concept enables the user to operate three different functions by one brake pedal.

By using a plain stem or screw fitting the castor has to be aligned in travel direction. We recommend a plate fitting. Please contact STEINCO.

> Page 73

Dual lock

Non-marking polyurethane tyre,
also available in an electrically conducting version

**Product benefits**

- Top product quality
- Award-winning design
- High degree of individualisation
- One-off solutions are easy to produce
- Compatibility between all products within the product family
- Solutions for almost any purpose

Series: **530, 531**

SERIES 530 PROFIL

Hooded twin wheel swivel castor

Technical specifications

- black polyamide or chrome plated zinc die cast casing;
- combined plain ball bearing swivel
- non-marking, black polyamide wheel or
- non-marking, grey polyurethane tyres (TPU)
- riveted axle

Available options / equipment

- expansion sleeve mounting (page 129) and other mounting options
- load controlled brake according EN 12529 available, with polyamide casing (\varnothing 52 mm)
- further RAL colours (minimum order quantity required)
- stainless steel version

Series: 530, **531**

SERIES 531 PROFIL

Hooded twin wheel swivel castor
with wheel brake

Technical specifications

- black polyamide or chrome plated zinc die cast casing
- combined plain ball bearing swivel
- non-marking, black polyamide wheel or non-marking, grey polyurethane tyres (TPU)
- riveted axle

Available options / equipment

- expansion sleeve mounting (page 129) and other mounting options
- further RAL colours (minimum order quantity required)
- stainless steel version

Series: 550, 551, **551D**, 552, 554, 557, 550H, 551H

SERIES 551 D

Twin wheel swivel castor
with total lock and double brake pedal

RAL
7004**Technical specifications**

- Polyamid casing
- Precision ball bearing swivel
- non-marking, grey polyurethane tyres (TPU)

Available options / equipment

- other mounting options
- further RAL colours (minimum order quantity required)
- rotating double cable guard (page 34)

The double brake pedal design provides easy access to the brake function – independent from the position of the castor

SERIES 551 D

Series: 550, 551, 551D, **552**, 554, 557, 550H, 551H

SERIES 552

Twin wheel swivel castor

with directional lock

RAL
7004

Technical specifications

- Polyamid casing
- combined plain ball bearing swivel (\varnothing 100 mm)
- Precision ball bearing swivel (\varnothing 125 mm)
- non-marking, grey polyurethane tyres (TPU)

Available options / equipment

- other mounting options
- further RAL colours (minimum order quantity required)
- Precision ball bearing swivel (\varnothing 100 mm)
- Cable guard from \varnothing 100 (page 34)
- Label for directional lock and brake pedal

By using a plain stem or screw fitting the castor has to be aligned in travel direction.

We recommend a plate fitting. Please contact STEINCO.

SERIES 557

Twin wheel swivel castor

with dual lock
(total and directional lock)

RAL 9002

Technical specifications

- Polyamid casing, RAL7004
- marking label
- non-marking, grey polyurethane tyres (TPU)

Available options / equipment

- other mounting options
- further RAL colours (minimum order quantity required)
- Cable guard (page 34)

Multifunctional brake

The twin wheel castor combines total and directional lock brake. This new concept enables the user to operate three different functions by one brake pedal:

- Directional lock
- Neutral
- Total lock

In order to match the same overall height SERIES 557 can only be combined with SERIES 550H and SERIES 551H (page 74/75)

By using a plain stem or screw fitting the castor has to be aligned in travel direction. We recommend a plate fitting. Please contact STEINCO.

Series: **560**

SERIES 560

**Twin wheel swivel castor |
Low overall height**

RAL
7004**Technical specifications**

- Polyamid casing
- Swivel bearing with two precision ball bearing
- easy assembly by allen head screw
- non-marking, grey polyurethane tyres (TPU)
- Tyres 80 Shore A or 94 Shore A
- delivery includes a washer

Available options / equipment

- further RAL colours (minimum order quantity required)
- Screw M10/M12 is easily replaceable
- "upside-down" version (bolt from top)
- electrically conductive version
- mounting hardware

Rust-proof castors.

Pressed steel. Nylon. Stainless steel.

Challenging climatic conditions and high standards of hygiene, such as those found in hospitals or the food industry, require castors to be machine washed at high temperatures. In this section, you will find castors designed for these extreme conditions and which are made entirely of rust-proof pressed steel, high-quality plastic or stainless steel.

With their specialised material properties and premium-quality workmanship, they are protected against water, salt, fat and cleaning products. This applies particularly to the stainless steel castors in the **SERIES200**, which are of course also available in electrically conductive versions.

SERIES841R

> Page 85

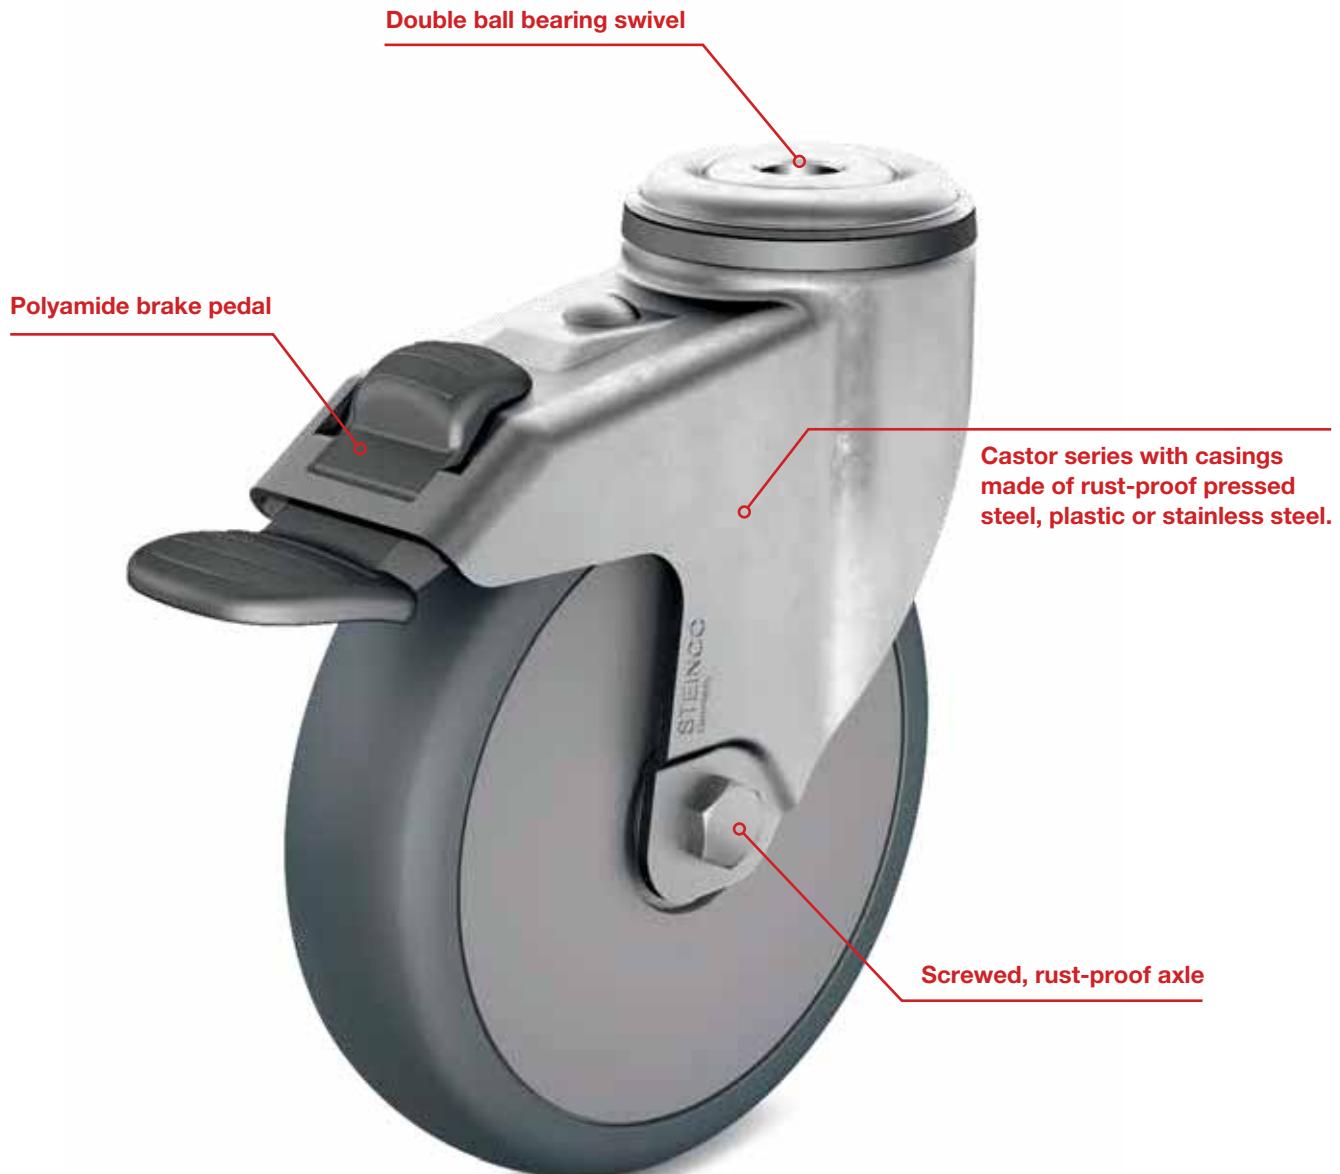

Product benefits

- Machine washable at high temperatures
- Weather proof
- Extremely robust with long service lives
- Resistant to water, salt, grease and cleaning products

SERIES331R

> Page 83

Series: **330R**, 331R

SERIES330R

Swivel castor**Technical specifications**

- pressed stainless steel casing
- double ball bearing swivel
- non-marking, grey thermoplastic rubber tyres (TPE)
- screwed stainless steel axle

Available options / equipment

- other mounting options
- Polyurethane tyres (TPU)
- plain bearing wheel with grease suitable for low temperature
- as rigid castor, SERIES**680R**

According to DIN 18867-8, commercial kitchen, with bolt hole, top plate 95x70 mm and plain stem 18x62 mm

- Polyamid casing
 - Swivel with rustfree precision ball bearing
 - demountable wheel with two rustfree ball bearings
 - non-marking, grey polyurethane tyres (TPU)
 - riveted, rustfree axle

Available options / equipment

- Expansion sleeve mounting (page 129) and other mounting options
 - further RAL colours (minimum order quantity required)

By using a plain stem or screw fitting the castor has to be aligned in travel direction. We recommend a plate fitting. Please contact STEINCO.

**Description of symbols on pages 24-25, as well as on fold-out page.
For sleeve, plate and plain stem dimensions, see pages 128-131.**

STEINCO Castors and Wheels 89

Transport castors.

For AGV systems.

STEINCO transport castors from the SERIES200–207 and SERIES210/212 have been specially developed for the requirements of AGV technology. The castors are highly variable for virtually all installation needs such as height, wheel and yoke widths. Adaptation is then simple to any system type and its specific requirements. These STEINCO castor types are being used successfully in clinics, hospitals and industry. The castors excel with their reliability and robust design. As both original equipment and replacement parts, these castors provide exceptional flexibility and have now become standard for AGV usage. The focus of our 200-207 and 210/212 castor series is on variability, flexibility and user friendliness to guarantee simple and problem-free implementation into your system.

SERIES201 and SERIES207

The **total lock** is operated via a fixed, non-swivelling brake pedal. The brake pedal is therefore accessible at all times. The wheel lock is adjustable.

SERIES202F

The **directional lock** is operated via a fixed, non-swivelling brake pedal. The brake pedal is therefore accessible at all times.

SERIES202 and SERIES207 (SERIES212)

The **directional lock** is automatically activated via a spring ball mechanism when the castor moves forwards or backwards. When a pivoting force is applied (adjustable between 3 ± 0.5 Nm or 7.5 ± 0.5 Nm), the directional lock is deactivated. The directional lock can be retrofitted.

Product features

- Reliable operation
- Original equipment and replacement parts available
- Flexibly adaptable to any application
- Machine washable at high temperatures
- Weather proof
- Extremely robust with long service lives
- Protected against water, salt, fat and cleaning products
- STEINCO quality. Made in Germany

Technical data

- housing made of welded 5 mm stainless steel
- rust-proof, sealed ball bearing in the swivel bearing
- rust-proof bolted axle
- high-quality polyurethane tyre material
- rust-proof precision ball bearings within the wheel

Available options

- other top plate dimensions on request
- electrically conductive varieties

Available wheel diameters

- 125, 150, 160, 175, 200 mm

Hydraulic brake

It works independently of the other braking functions. The equipment is then easy to manoeuvre even on inclines and when heavily loaded.

The brake can be retrofitted at any time.

Centralised braking can be achieved via a special transmission lever between the brake pedals or via a system integrated into the equipment.

Series: **210, 212**

SERIES 210

Swivel castor for AGV systems**Technical specifications**

- 4 mm stainless steel casing
- sealed, rustfree ball bearing swivel
- non-marking, grey polyurethane tyres (TPU)
- tyres 94 Shore A
- rust-proof precision bearings within the wheel
- rustfree, screwed axle

Available options / equipment

- ø 100 and ø 125 mm
- further plate fittings
- tyres 80 Shore A

Central locking castors.

Hospital and nursing home bed cast

SERIES 568/569

> Page 98

Castors and wheels must meet continually increasing demands especially in the field of medical care. Hospital and nursing home bed castors from STEINCO fully meet these high demands for quality. The award-winning design, high standards of hygiene and shock-absorbent casings are just some of the many features that win over users of our maintenance-free hospital and nursing home bed castors.

STEINCO has a product series for any situation, ranging from standard solutions from the series **558/559** and single wheel castors (**758/759**), to castors with a low design height (**568/569**), through to heavy duty versions. Our programme is completed by a variety of versions for nursing home beds. Within the product series, individualised solutions regarding colours, locks and mountings are always possible. **Just contact us.**

Machine
washable

Hygiene is very important in medical and nursing applications. The majority of castors in this series is available in a machine-washable version. More information can be found in the product pages.

Product benefits

- Fulfils the highest quality requirements
- Award-winning design
- Full product family
- Specialised versions for nursing home beds
- Washable, electrically conductive
- Individualised solutions regarding colours, locks and fixtures

Single- and double-sided cable guards

In rooms with multiple cables, e.g. operating theatres, the cable guards push the cables aside to prevent them being run over. The single-sided guard does this when moving forwards, the double-sided guard when moving forwards or backwards.

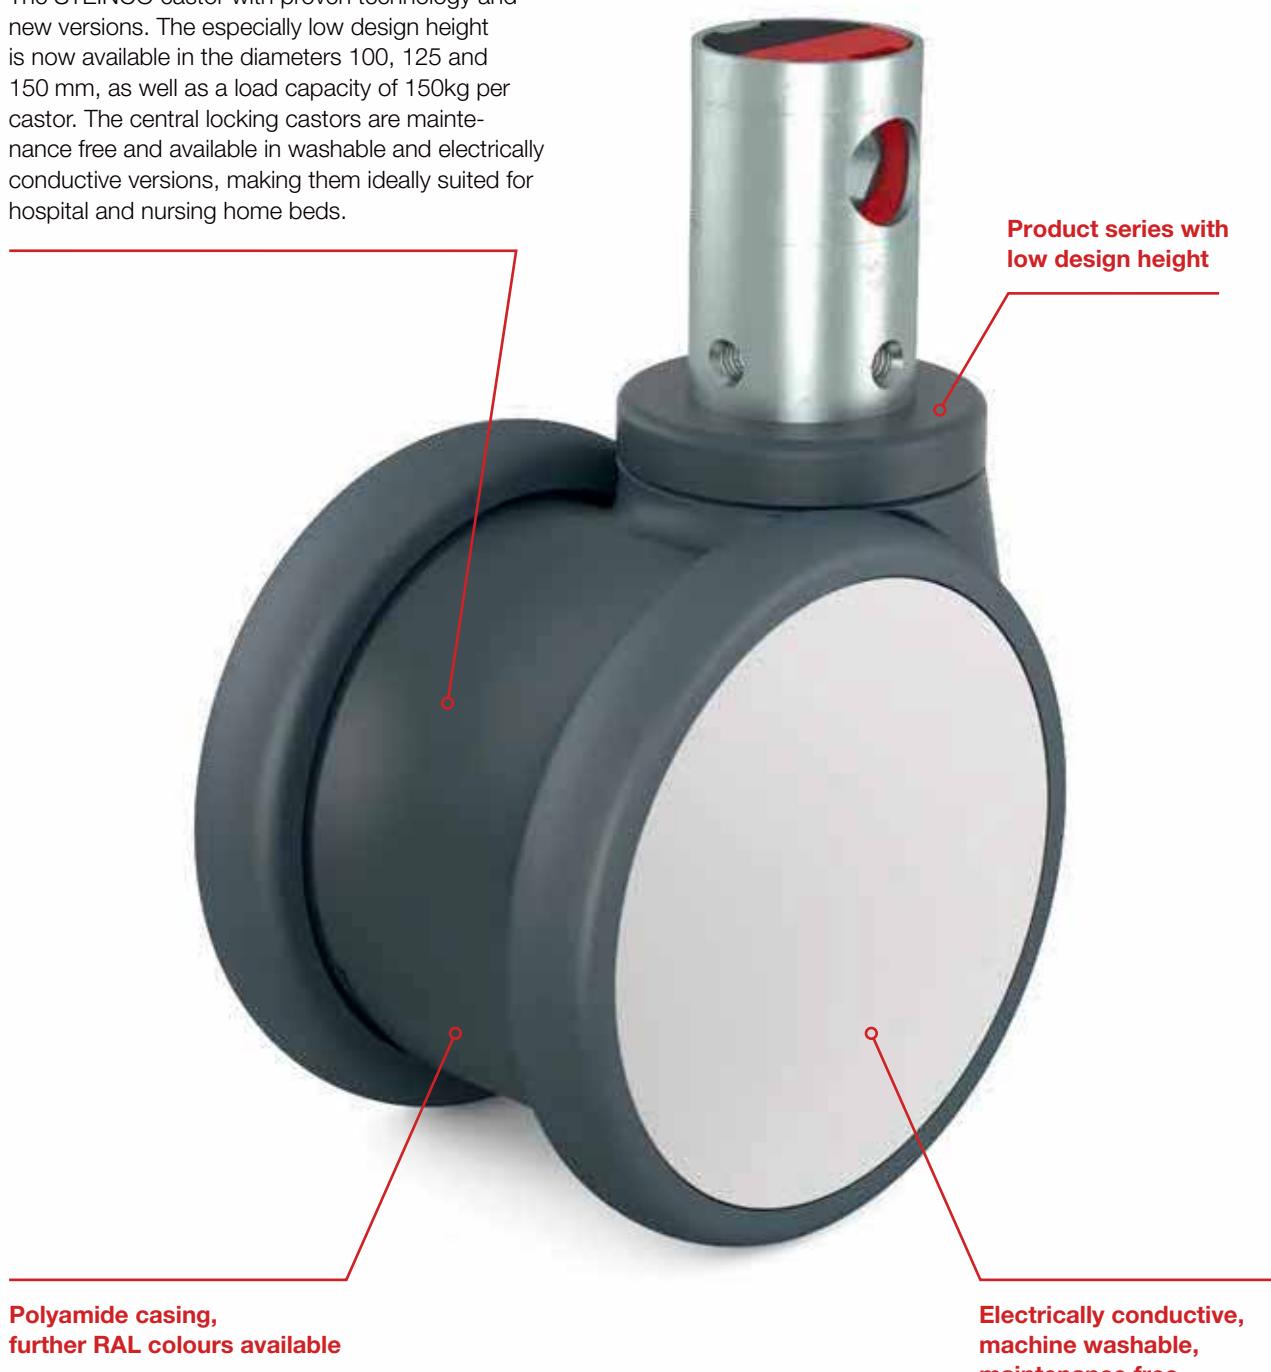

For castors 550/559

ors.

SERIES 568 and SERIES 569

The STEINCO castor with proven technology and new versions. The especially low design height is now available in the diameters 100, 125 and 150 mm, as well as a load capacity of 150kg per castor. The central locking castors are maintenance free and available in washable and electrically conductive versions, making them ideally suited for hospital and nursing home beds.

Aviation.

STEINCO swivel castors for aircraft catering trolleys are designed especially to meet the requirements of the aviation industry. Outstanding swivel and running properties guarantee optimum manoeuvrability in the narrowest spaces, and centrally operated locks ensure trolleys stand securely. The reduced-weight design and use of flame-resistant plastics reduce fuel consumption and meet additional safety requirements.

The swivel castors for aircraft trolleys are available as single wheel and twin wheel castors in polyamide casings, optionally equipped with centrally operated locks. The particularly robust pressed steel version of the SERIES **320A/322** complete the product family.

SERIES815

eFS Electronic locking system.

The STEINCO eFS system independently controls equipment locking functions via a control unit. It can function with up to four different stop modules.

eFS is electrically operated and can be retrofitted into existing control systems. Functioning and the pressure applied to each stopper is monitored individually. Locking takes place via the PU stops. These press downwards onto floors without lifting the castors thereby fully securing the equipment.

Diverse applications.

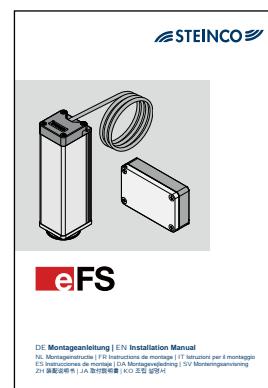

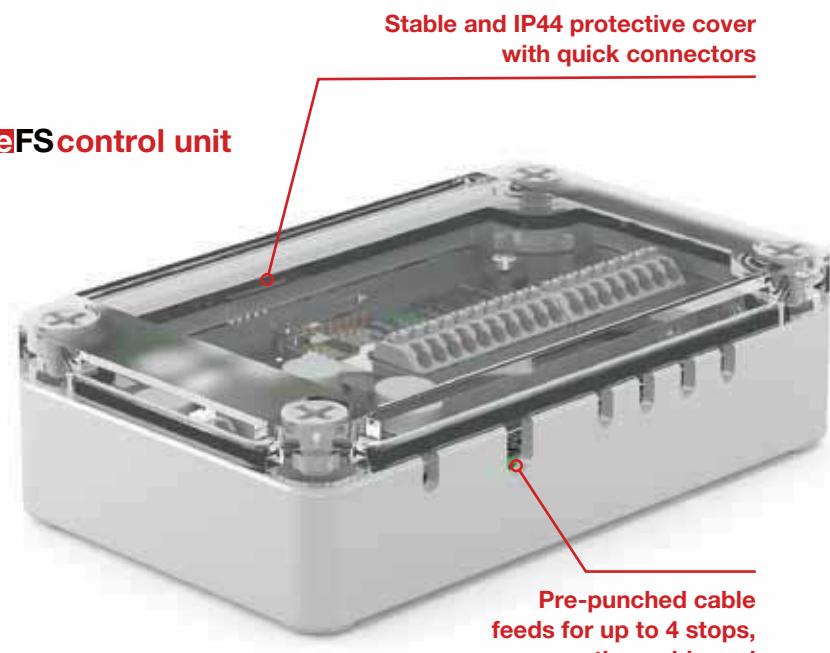

- Operating tables
- Technical medical equipment
- Special-purpose and equipment trolleys
- Hospital and nursing home beds
- Treatment chairs
- Computer trolleys
- Workshop-hoist trolleys
- Food transport trolleys
- Plus many more

The modular and compact design of the eFS means it can be used in a wide range of areas, systems and industries. We will be happy to work with you to develop a system for your specific needs. **Just get in contact.**

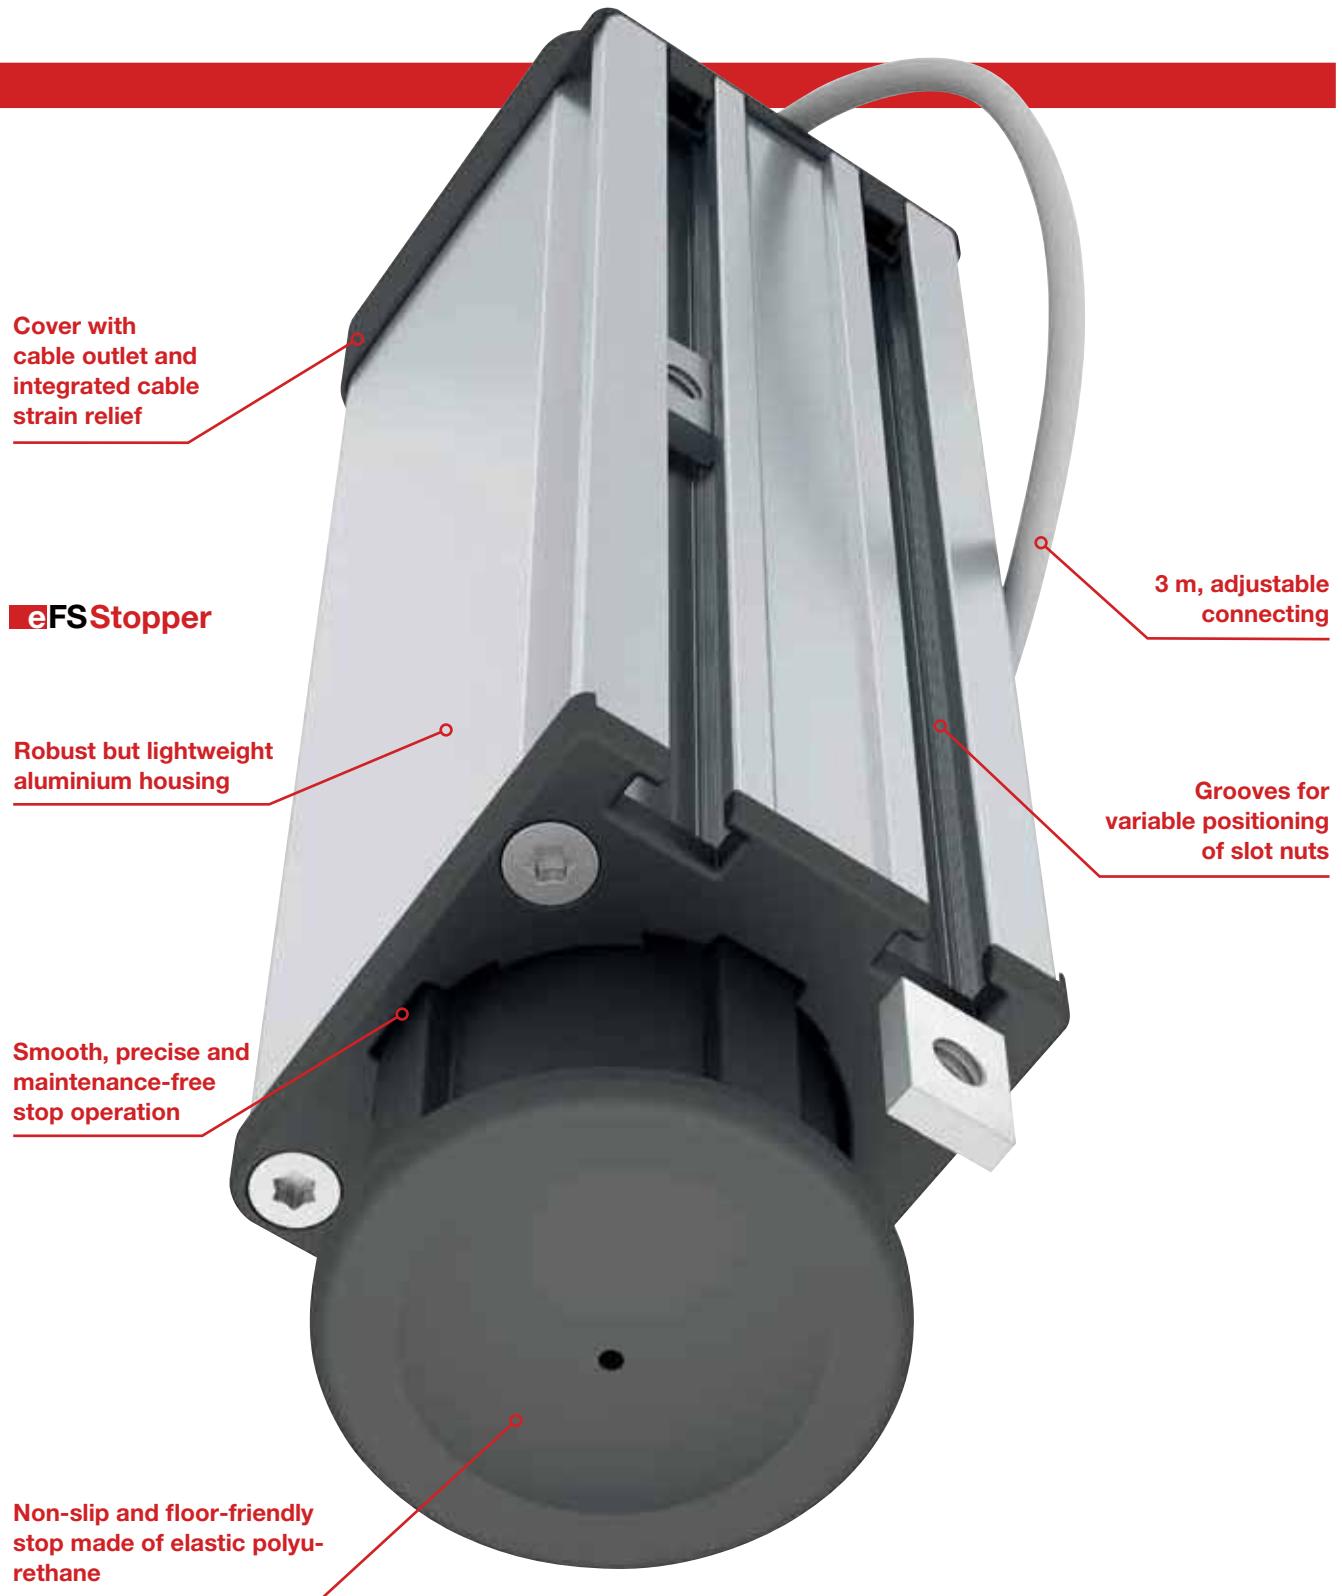

Product features

- Locking function in separate unit – independent from castor
- High stability – safe also on uneven floors
- Only two components – efficient storage and logistics
- Compact design – requiring minimal installation space
- Simple connections – quick installation and electrical connection
- Variable operation – “hold-button” or “touch-button” functioning
- Maximum safety – “touch-button functioning” and “dead-man” feature
- Electric operation – effortless, centralised operation and set-up
- Versatile control – easy integration into existing control elements
- Variable mounting slots – retrofitting possible
- Can be combined with all STEINCO castors – independent from diameter and version

eFS Functioning.

i

Floor traction for safety.

The eFS stopper applies only the necessary pressure. The castors always remain in contact with the floor.

Pressure is electronically adjustable in 16 steps from approx. 200 to 1000 N. The safety of loads is never at risk and the combination of castors and stops ensure stability.

eFS Operation.

Stability at the touch of a button.

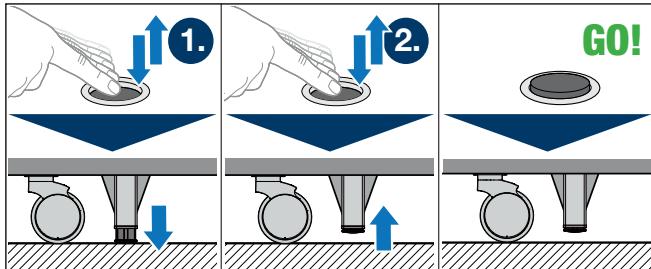

The eFS provides different options for operation: integrated into your operating unit; individual operation; or via an induction loop. Hold- and touch-button operation is also possible via a central control unit.

A.

Touch mode (factory setting)

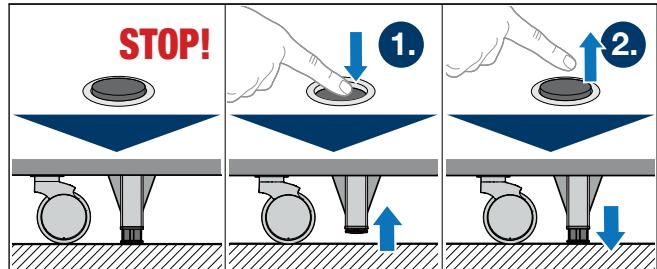

When the button is pressed, all stops immediately move downwards until they touch the floor and successively achieve the set pressures. Re-pressing the button unlocks and retracts the stops.

B.

Hold mode and dead-man principle

In the non-pressed position, the equipment is secured and the stops are firmly on the floor. Pressing and holding the button retracts the stops until the button is released.

eFS Integration.

i

Customer

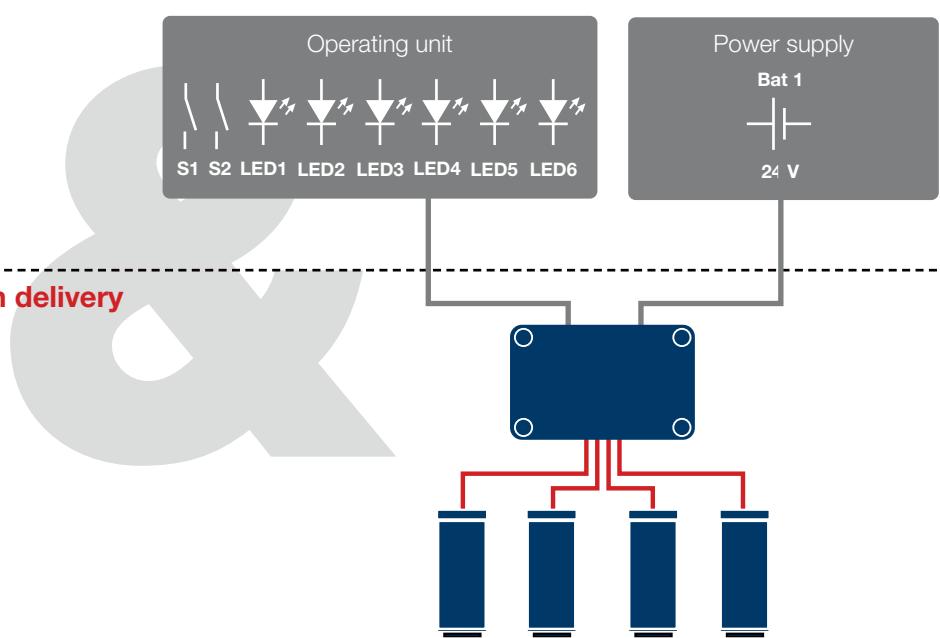

- Power supply
- Operating button
- Control lights
- Mounting

CUSTOMER

STEINCO eFS Included in delivery

Control unit

Stoppers

eFS control unit

- Switching between touch and hold modes
- Adjusting contact pressure
- Connection of up to 4 stops using 2-core connection cables
- Connection of control LEDs
- Optional "hold" and "touch" mode

eFS control unit

WCD50

eFS stopper

- Each stopper supplied with 3 m connecting cable
- Each stopper can be controlled independently
- Pressure force individually adjustable from approx. 200 – 1,000 N
- Pressure-activated switch-off in the lowered position
- Stroke length approx. 20 mm
- 4 mounting nuts

eFS stopper

WCD00

zFS Central locking system.

The zFS is freely configurable: depending on the build type, this allows either the secure locking of all four of a unit's castors, or the cost-effective partial locking of a unit that can function safely with just two locked castors. In both cases, it is mechanically ensured that the castors are simultaneously locked or free to move. This prevents known incorrect usage and ensures the highest possible efficiency is achieved.

Regardless of the selection of full or partial locking, single or double-sided controls can be implemented. In this way, individual ergonomic requirements can be taken into account. The colour coding of the control pedal is self-explanatory and its position gives a clear and direct indication on the status of the system.

Product benefits

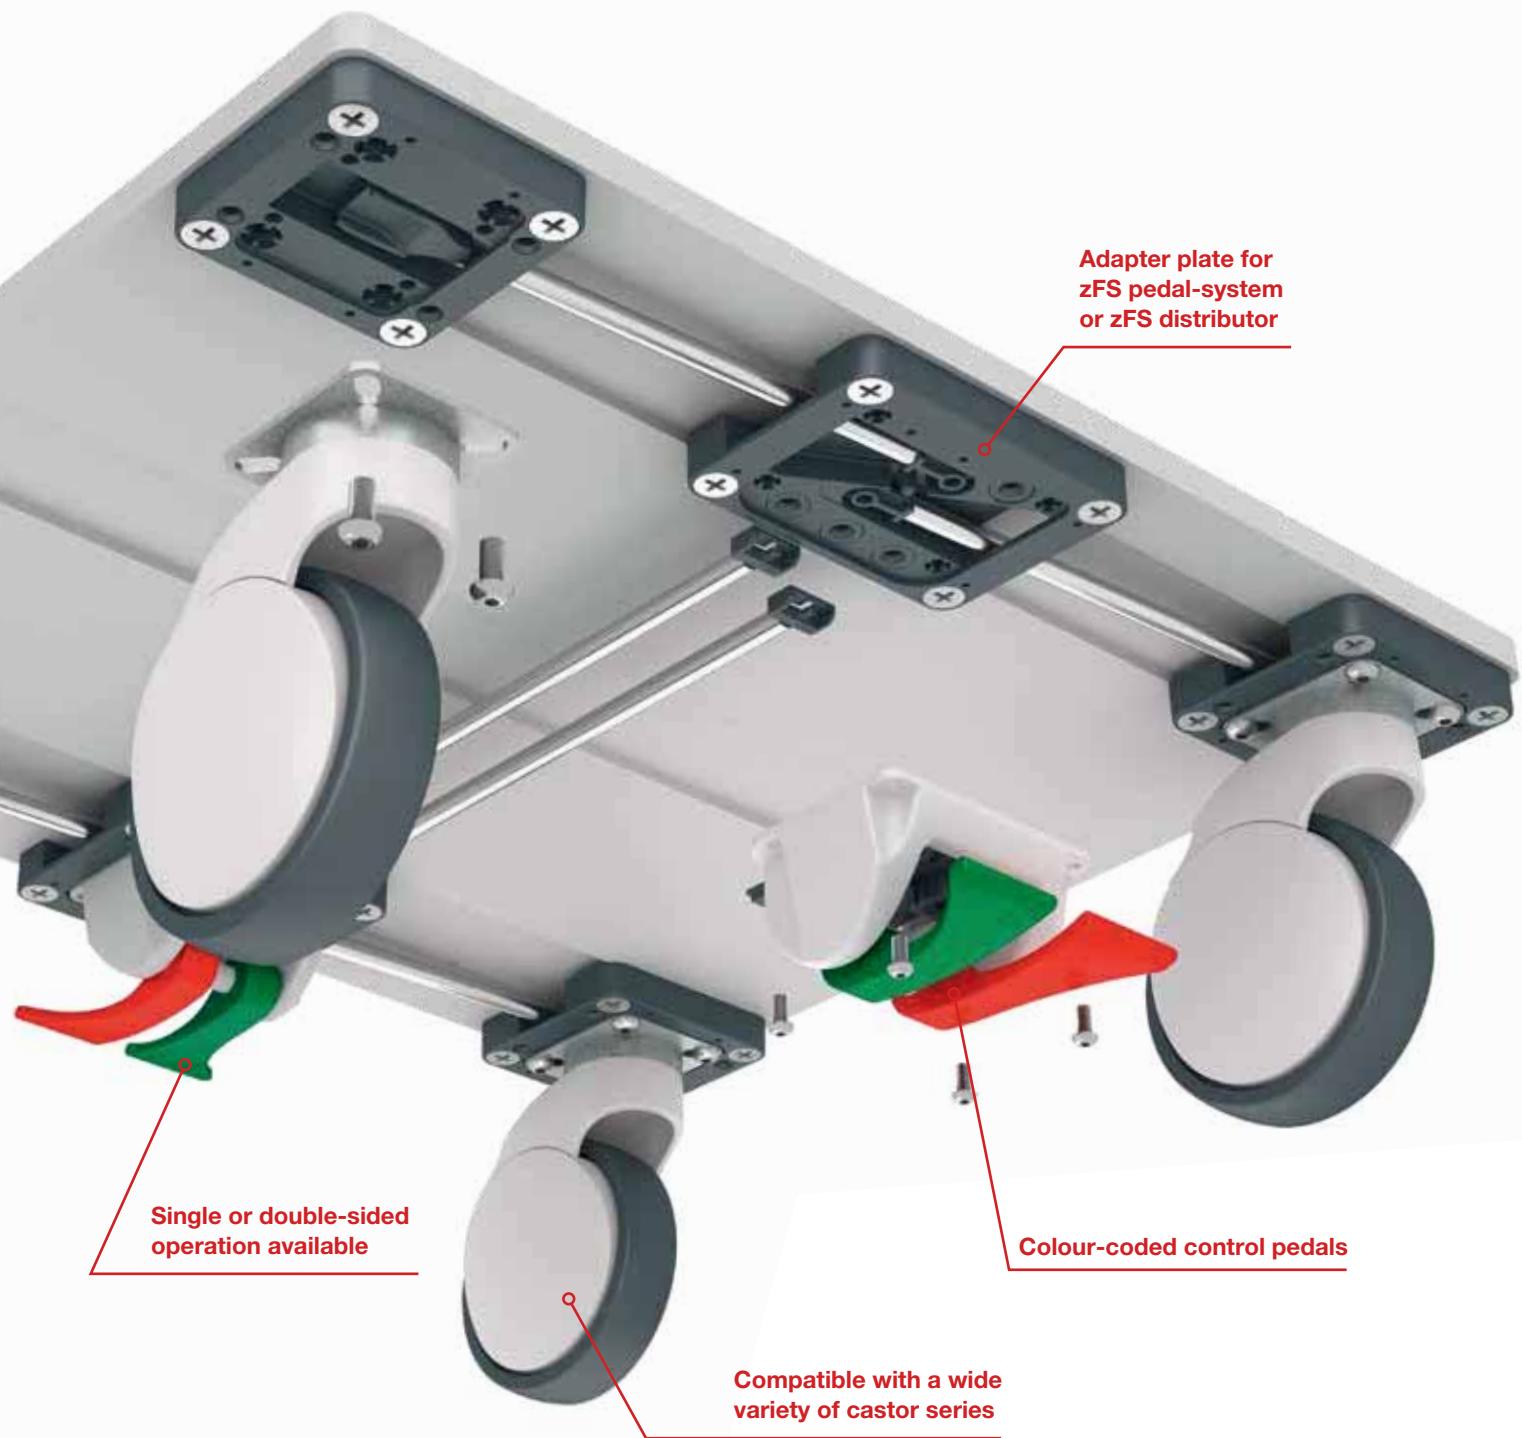

- Variable configuration through modular design
- Compatible with a wide variety of castor series
- Simple operation through colour-coded pedals
- Simple scalability requiring almost no tools
- Non-verbal assembly instructions available for download can be found online. www.steinco.de

zFS Modules.

The modular central locking system zFS, with just a few components, offers multiple configurations that can accommodate the customer's requirement. With zFS and a wide range of compatible castor series, the user can individually configure their mobility requirements and set themselves apart in the market with safety, ergonomics and design features.

zFS adapter plate

For zFS pedals or zFS distributor.

Here, the pedal is connected to the bar. The whole unit can be screwed together (as with the adapter plate castor zFS) either in a customised way or with the available fixings. Alongside through-holes for different screws, integrated reducer sleeves provide holes also for countersunk head screws.

zFS adapter plate

CO100

zFS pedal system

The operating interface for the central locking system. Using the red pedal locks the castors. The pedal then remains in the low position. Using the green pedal releases the locks on all castors and shifts the red pedal into the neutral start position.

zFS pedal system

VY2A0

zFS distributor

In the case of full locking with one-sided operation, the lengthways synchronisation is controlled through the distributor.

zFS distributor

VY2D0

zFS adapter plate castor

For fixing the castors and the system to the operating device. The bar is redirected within the adapter plate. To fix the operating device, holes for different screw types are provided (due to the variety, these are not included in delivery). Different castor series are fitted by using the available mountings. The mechanics of the locks, with a height of 15 mm, means that synchronisation is possible in narrow installation spaces.

zFS adapter plate castor

C0200

zFS tube section

zFS transmission pedal

zFS connector

Along with the zFS tube section, various transmission pedals and connectors all necessary bars can be configured. The zFS transmission pedals serve to connect the pedal system and castors, whilst the zFS connector connects two pedal systems, or the zFS pedal system and the zFS distributor.

zFS tube section

KZ3A0

zFS transmission pedal

CU200

zFS transmission pedal

CU230

zFS connector

CU260

zFS support

Where bars exceed a tube length of 1.000 mm, an optional bar support should be fitted to guard against buckling and/or damage. The zFS support, mounted between the components, can of course be retrofitted.

zFS support

KZ260

Tube sections

Where the height or position of castors vary, pressure from the pedal system or distributor to the castors can be alternatively achieved using flexible or pliable tube sections.

Just contact us. We are glad to provide specialised solutions for your requirements.

pliable

flexible

zFS Design.

Wheels and accessories

The wheel, one of humanity's greatest inventions, is the basis for our current speed and mobility. Wheels must withstand mechanical, chemical and thermal stress and remain reliably on track.

Our non-marking wheels are manufactured from high-quality materials and equipped with precise and durable plain or precision ball bearings. All wheel types are also available to you in electrically conductive versions. They conform to current international standards and regulations. Here you will find an overview of the range of STEINCO wheels and accessories on which our castors are built.

You can find a list of the chemical resistances on page 136.

Product benefits

- High-quality materials
- Resistant to mechanical, thermal and chemical stress
- Electrically conductive varieties
- Individualised colour options
- Broad range of accessories

Product information.

According to the liability of the manufacturer for its products defined in the Product Liability Law (§4 Prod-HaftG), the following information concerning wheels and castors must be taken into account. Failing to take this information into account exempts the manufacturer from its duty of liability.

1. The product information and intended use

of wheels and castors in the sense of this definition are generally exchangeable components which can be fitted to suitable equipment, furniture and transport systems, or similar products, in order to render them mobile. This product information refers to castors and wheels, in particular to passively steering castors (swivel castors), for non-automatically mobilised vehicles and equipment, hereafter referred to as „objects“, which in general do not move faster than walking pace and are not in continuous operation. Wheels and castors in the sense of this product information may be classified according to the following areas of application:

Residential sector:

e.g., seating, furniture

Service sector:

- General service applications, e.g., shopping trolleys, office equipment
- Hospitals, e.g., hospital beds

Industrial sector:

e.g., transport equipment (middle to heavy load bearing capacity)

To comply with intended use, proper assembly is particularly important:

- The product must be firmly fitted to the object at all provided fitting points.
- The object must have sufficient strength at these points.
- The function of the product may not be impaired or changed during assembly.
- Swivel castors must be assembled so that their swivel axles are positioned vertically.
- Rigid castors must be assembled with their wheel axles in alignment.
- Only swivel castors of the same type may be fitted to an object. If rigid castors are also fitted, only castors recommended for the purpose by the manufacturer may be used.

Products used in damp environments, exposed to direct weathering, used near the sea or in aggressive environments that induce corrosion must be specified in a specialised version. Products used in temperatures below 5°C and above 30°C are to be specified in specialised versions.

Standard products should never be used with nominal loads under such conditions. Wheel, casing, locks and axle accessories represent a functional unit.

Liability is only granted for our original products. All possible loads must be known for the selection of castors, otherwise loads are to be estimated with sufficiently added safety factors.

2. Product specifications

Where product specifications are not explicitly stated in our catalogues, brochures, specification sheets, etc., the requirements placed on our castors (and their components) must be agreed with us. Guidance is provided here by EN standards 12527–12531.

3. Product maintenance

Depending on the respective requirements, wheels and castors must be regularly serviced: through lubrication of the bearings and readjustment of detachable connections. Only cleaning agents may be used that do not contain substances that cause damage or corrosion. Castors (and their components) must be replaced as soon as functional impairment occurs.

4. Misuse

Misuse – i.e., utilisation of wheels and castors for unintended purposes – is defined as, for example:

use of wheels and castors for loads heavier than the maximum load capacity specified in the catalogue

exposure to a caustic environment

use on unsuitable, uneven floors

excessive impact and fall stress

foreign objects entering the wheel tread

moving wheels and castors at excessive speeds

use in temperatures that are too high or too low

exposure to lateral forces

moving an object with locked castors by force

modifying the products without the agreement of the manufacturer

Castor brakes in all series are not intended to provide transport and loading safety in trucks, cars and other similar vehicles. Non-compliance with this information can lead to damage of the locking function.

5. Information and instruction obligations

In compliance with the information and instruction obligations, as well as maintenance work according to the product liability law, the following documentation is available:

- For traders: Catalogues with product information
- For the processing industry: Catalogues with product information
- For users: Product information

To ensure the functionality of the wheels and castors,

- the trade sector is obliged to heed the product information (points 1-6) and, where necessary to request them from the manufacturer and forward them to the processing unit;
- the processing sector is obliged to heed the product information (points 1-6) and, where necessary, to request them from the manufacturer or trade sector and forward them to the user.

6. Dimensions

Dimensions indicated in this catalogue are approximations, as is usual in this industry.

Design is subject to change where modifications represent technical advancement.

Technical information.

We move the most diverse products with our castors and wheels – nationally and internationally. With innovative solutions and well-engineered products, we continually set benchmarks and inject new momentum into the market. At the same time, we're always aware of current standards and legal requirements. You can be assured that by using STEINCO products, you always implement the latest technology.

In this chapter, we've gathered together in one place all the important information about STEINCO castors and wheels. Alongside information about products and intended usage, you will also find valuable advice concerning automated decontamination and the electrical conductivity of our castors, as well as about REACH and RoHS guidelines.

Electric conductivity (ESD)

The electric conductivity of the wheels and coatings can change due to residue deposits – or through chemical and mechanical stress – in such a way as to exceed values defined as acceptable in the standards. In particular, dust, dirt, paint, acids, alkali, overloading and impacts can lead to a decrease, or even a complete interruption, in the discharge of electric/electrostatic energy into the floor.

Due to the abundance of factors unknown to us that affect our products when in use, confirmation of electric conductivity refers exclusively to compliance with the defined acceptable values when the castors and wheels are new. For this reason, conductivity during operation must be tested at regular intervals by the user.

Automated decontamination

STEINCO hospital bed castors in the series **558W/559W**, **568W/569W** and **758W/759W PRIMUS** are suitable for automated decontamination subject to applicable regulations such as the „automated decontamination“ guidelines from the AK-BWA.

Metal components at risk of corrosion are fitted with the corresponding surface covers. Many years of practical experience and washing trials confirm their suitability.

Based on the AK-BWA, the follows standard values apply:

- Cleaning/disinfection 2 minutes at max. 70°C
- Rinsing 20 seconds at 85°C
- Maximum PH values of the washing solution: 5 – 9

Inappropriate washing conditions can lead to premature impairment of certain functions.

Furthermore, care should be taken to protect the area around the mounting pin from strong washing agents.

Castors are intended for use at temperatures of 20°C.

For this reason, an appropriate cooling period is required following the washing process before the castors can be put back to their intended use.

This also applies to the lock.

If used too soon, the heated plastic components may set under the switching pressure, leading to a permanent impairment of function.

Cleaning by using wipe disinfection is possible without any restrictions.

You can find a list of the chemical resistances on pages 136-137.

Certificate of compliance REACH and RoHS

For the most part, the REACH regulation took effect on June 1, 2007. REACH stands for:

- Registration
- Evaluation
- Authorisation of Chemicals

One of the defined goals of the REACH regulation is to increase awareness of the dangers and risks associated with chemicals. Within the REACH regulation's scope of application, once certain deadlines have passed, only chemical materials that have been previously registered can be circulated.

STEINCO Paul vom Stein GmbH assumes this responsibility and conscientiously observes the obligations that have arisen and will arise from the regulation. For our products, we are not the manufacturer of the processed materials, but rather a so-called „downstream user“. In our function as downstream user in the supply chain, we strive to ensure that all our suppliers undertake to register the materials concerned.

Associated with this status are particular information obligations within the supply chain, which we perform diligently. STEINCO also fulfills its obligations regarding the ROHS Directive.

Index.

To help you find the right castor according to specific criteria, we provide three different indexes. The indexes are sorted in ascending order by article number, wheel Ø or load capacity. The search criteria is identifiable by a pictogram with a red background. Once you selected your castor the page number will lead you to the product page containing all important details.

Article number

Description of symbols on pages 24-25, as well as on fold-out page.

Terms of supply and payment.

Scope of validity

01. These Conditions of Sole apply to business owners, legal entities under public law and special funds under public law. Our deliveries and services are provided exclusively on the basis of the terms and conditions below. The business terms and conditions of the partner, unless expressly recognised by us, have no validity.

General provisions

02. Full details of any verbal agreements will be immediately confirmed in writing by the contracting partners.

03. Orders will not be binding until they are confirmed by us.

04. Information and illustrations contained in brochures and catalogues are, in accordance with usual trade practice, regarded as approximations unless they have been expressly described by us as binding.

Long-term and call contracts, price adjustment

05. Unlimited contracts may be terminated by 6 months' notice.

06. If any significant change occurs in the case of long term contracts (contracts with a term of at least 12 months and unlimited contracts), in respect of wage, material or energy costs, each of the contracting partners is entitled to demand an appropriate adjustment of the price, taking these factors into consideration.

07. Where a binding order quantity is not agreed, our calculation will be based on the non-binding order quantity expected by the partner for a specific period of time (target quantity). Where the partner purchases less than the target quantity, we are entitled to increase the unit price by an appropriate amount.

08. In the case of call supply contracts, unless otherwise agreed, binding quantities are to be notified to us by call not less than 6 weeks before the delivery date. Any additional costs caused by our partner through late calling or subsequent amendments to the call in respect of time or quantity are to be borne by the partner; in this respect our calculation will prevail.

Confidentiality

09. Each of the contracting partners will use all documents (which will also include samples, models and data) and information received by them under the business relationship only for the contractual purpose, and maintain secrecy in respect of third parties with the same due care as applied to their own documents and information, where the other partner describes them as confidential or has an obvious interest in maintaining secrecy in respect of such documents or information. This obligation commences on receipt of the first documents or information and ends 36 months after the end of the business relationship.

10. The obligation does not apply to documents and information which are generally known, or which were already known to the contracting partner on receipt and where the contracting partner was not under obligation of secrecy, or where they are subsequently conveyed by a third party who is authorised to pass on such documents or information, or where the documents or information are developed by the receiving contract partner without exploitation of documents or information of the other contracting partner.

Drawings and specifications

11. Where one of the contract partners makes available to the other drawings or technical documents relating to the goods to be supplied, or to the manufacture of such goods, to the other partner, these remain the property of the contract partner submitting them.

Samples and production materials

12. Manufacturing costs for samples and production materials (tools, moulds, templates, etc.) will, unless otherwise agreed, be invoiced separately from the goods to be supplied. This also applies to production materials which have to be replaced as a result of wear and tear.

13. The costs for maintenance and proper storage, together with the risk of damage to, or destruction of the production materials, will be borne by us.

14. Where, during the period of manufacture of samples or production materials, the partner abandons or terminates the co-operation, all manufacturing costs incurred up to that time will be born by that partner.

15. Even where the partner has paid for them, the production materials remain our property at least until completion of the supply contract. The partner is then entitled to reclaim the production materials, where a mutual agreement has been reached in respect of the time of delivery and the partner has fully complied with his contractual obligations.

16. We will keep the production materials free of charge for three years after the final delivery to our partner. We will then request our partner in writing to make known his views on their further use within 6 weeks. Our duty of storage will end if, within these 6 weeks, no such statement has been made, or if no new order has been given.

17. Purchaser-related production materials may only be used by us for supply to third parties with the prior written agreement of our partner.

Prices

18. Our prices are in Euro, exclusive of turnover tax, packing, freight, carriage and insurance.

Payment terms

19. All invoices are due for payment within 30 days net or cash discount of 2% within 14 days of the invoice date.

20. Where we have indisputably supplied goods which are partly defective, our partner is nevertheless obliged to pay for the non-defective part, unless partial delivery is of no use to him. In other respects the partner may only set off payment against counter-claims which have been determined by final judgement or are not disputed.

21. If the payment terms are not met, we shall be entitled to bill interest on arrears at the rate charged to us by the bank for current account overdrafts, but at a minimum of 8 percentage points above the base interest rate of the European Central Bank at the time.

22. In the event of any delay in payment we may, after giving notice in writing to the partner, suspend our obligations until payments have been received.

23. Bills of exchange and cheques will only be accepted where this has been agreed, and only on account of performance and on condition that they may be discounted. Discount charges will be calculated from the due date for payment of the invoice amount. A guarantee for presentation of bills of exchange and cheques at the due and proper time and for the lodging of a protest is excluded.

24. If it becomes apparent after conclusion of the contract that our claim to payment is at risk owing to the partner's lack of adequate financial capacity, we shall be able to refuse performance and to set the partner a reasonable deadline within which it must make payment or provide security concurrently with delivery. If the partner refuses to do so or the deadline expires without result, we shall be entitled to withdraw from the contract and demand damages.

Delivery

25. Unless otherwise agreed, we will deliver „ex-works“. Compliance with the delivery date or delivery period will be based on our notification of readiness for dispatch or collection.

26. The delivery period commences on dispatch of our order confirmation and will be extended as appropriate where the provisions of Article 55 below apply.

27. Partial deliveries are permitted within reason. They will be invoiced separately.

28. Production-related long or short deliveries are permitted within a tolerance of 10 percent of the total order quantity. The total price will be adjusted accordingly.

Dispatch and transfer of risk

29. Goods which are notified as being ready for dispatch are to be taken over immediately by the partner. We are otherwise entitled, at our option, to dispatch them or to store them at the cost and risk of the partner.

30. In the absence of any special agreement, we will select the transport method and routing.

31. The risk is transferred to the partner on handover to the railway, forwarding agent or freight carrier, or on commencement of storage, but in any case not later than departure from the factory or warehouse; this also applies if we have undertaken delivery.

Delay in delivery

32. If we are able to anticipate that it will not be possible for the goods to be delivered within the delivery period, we will immediately inform the partner in writing of the reasons for this, and also if possible indicate the probable delivery date.

33. In the event of delivery being delayed by one of the circumstances as set forth in Article 55 below, or as a result of any action or omission on the part of the partner, an extension of the delivery period will be granted appropriate to the circumstances.

34. The partner is only entitled to withdraw from the contract if we are responsible for the delivery date not being met and the partner has allowed us a reasonable period of grace without result.

Reservation of title

35. We reserve the right of ownership in respect of the goods supplied until such time as all claims under the business relationship with the partner have been met.

36. The partner is entitled to sell these goods in the regular course of business, provided it meets its obligations arising from the business relationship with us in good time. However, it may neither pledge the reserved goods nor transfer ownership of them as security. It is obliged to protect our rights if goods which are subject to reservation of title are resold on credit.

Terms of supply and payment

37. In the event of breaches of its duties by the partner, in particular in the case of delayed payment, we shall be entitled, after a reasonable period of grace allowed to the partner for performance has elapsed without result, to withdraw from the contract and take back the goods; this shall not affect the statutory provisions concerning cases where it is not necessary to allow a period of grace. The partner shall be obliged to surrender the goods. We shall be entitled to withdraw from the contract if an application is filed for insolvency proceedings to be instituted against the partner's assets.

38. With immediate effect the partner assigns to us as security all claims and rights deriving from the sale or any hiring, for which we may have given the partner permission, of goods over which we have rights of ownership. We hereby accept the assignment.

39. Any working or processing of the goods which are subject to reservation of title shall at all times be carried out by the partner on our behalf. If the goods which are subject to reservation of title are processed or inseparably mixed with other items not owned by us, we shall acquire joint ownership of the new product in the proportion of the invoice value of the goods which are subject to reservation of title to the other processed or mixed items at the time of processing or mixing. If our products are combined or inseparably mixed with other moveable items to form a single product and the other product is deemed to be the principal product, the partner shall transfer joint ownership to us on a pro rata basis, as far as the principal product is owned by it. The partner shall maintain ownership or joint ownership on our behalf. In all other respects the same shall apply to the product created by processing or combination or mixing as to the goods which are subject to reservation of title.

40. The partner must inform us immediately of enforcement measures being taken by third parties in respect of the reserved goods by handing over to us the documents required for any intervention. This also applies to infringements of any other kind.)

41. If the value of the existing securities exceeds the secured claims in total by more than 20 percent, we undertake, at the partner's request, to release securities of our choice in this respect.

Material defects

42. The quality of the goods is determined exclusively by the agreed technical supply specifications. In the event of our having to supply in accordance with drawings, specifications, samples and the like provided by our partner, the latter will take over the risk of fitness for the intended use. The condition of the goods in accordance with the contract is determined as at the time of transfer of risk in accordance with Article 31 above.

43. Any material defects in respect of any defect deriving from unsuitable or improper use, defective assembly or operation by the partner or third parties, normal wear and tear, defective or negligent handling, will also be excluded as the consequences of unsuitable modifications or repairs undertaken by the partner or third parties without our approval. The same shall apply to defects which only reduce the value of the goods or their fitness for their intended use to an insignificant extent.

44. Claims for material defects shall become statute-barred after 12 months. This shall not apply where the law prescribes longer periods of time as mandatory, particularly for defects in a building and in a product which has been used in accordance with its customary form of use for a building and has caused the latter to be defective.

45. Where it is agreed that the goods are to be accepted after completion or that initial samples are to be tested, notification of defects which could have been discovered by the partner under careful acceptance or testing of initial samples is excluded.

46. We must be given the opportunity of assessing the notified defect. The goods complained of must be returned to us immediately; we will take over the transport costs where the notice of defect is justified, in the event of the partner failing to observe these obligations, or carrying out modifications of the goods which are complained of without our consent, he will lose any claims for material defects.

47. In the event of notice of defect which is justified and made at the due and proper time, we will, at our choice, make improvements to the goods complained of or supply a replacement free of defect.

48. In the event of our failing to meet these obligations, or failing to do so within a reasonable time in accordance with the terms of the contract, the partner may set in writing a final deadline within which we must fulfil our obligations. In the event of this period expiring without result, the partner may demand reduction of the price, withdraw from the contract or himself carry out, or have the necessary subsequent improvement carried out by a third party at our cost and risk. There shall be no reimbursement of costs if the expenses increase because the goods have been brought to another place after delivery by us, unless this means that the goods are being used as they were intended to be.

49. The partner has statutory rights of recourse against us only in so far as the partner has not reached any agreements with its customer which go beyond the statutory claims for defects. In addition, Article 48, last sentence, applies accordingly to the scope of the rights of recourse.

Other claims, liability

50. Unless otherwise specified below, any additional or more extensive claims by the partner against us are excluded. This shall apply in particular to claims for damages for a breach of duties arising from the obligation or from unlawful acts. We are therefore not liable for any damage not deriving from the delivered goods themselves. We are in particular not liable for any loss of profit or other financial losses by the partner.

51. The limitations of liability indicated above do not apply in the case of specific intent, gross negligence on the part of our legal representatives or senior employees, and in the event of culpable violation of significant contractual obligations. In the event of culpable violation of significant contractual obligations we are liable – other than in cases of specific intent or gross negligence on the part of our legal representatives or senior employees – only for standard contractual loss, or loss which might reasonably have been expected.

52. The limitation of liability is also not applicable in those cases where there is liability in accordance with product liability laws in the case of defects in goods supplied for private use. It is also not applicable in case of injury of life, body or health and in the absence of guaranteed characteristics, if, and insofar as the object of the guarantee was to cover the partner against any losses not deriving from the goods supplied themselves.

53. Insofar as our liability is excluded or limited, this is also applicable to the personal liability of our employees, workers, personnel, legal representatives and vicarious agents.

54. The legal provisions relating to burden of proof are not affected by this.

Force majeure

55. Acts of God, industrial disputes, disturbances, official measures, non-arrival of deliveries from our suppliers and other unpredictable, unavoidable and serious events will release the contracting partners from their duty to perform for the duration of the disturbance and to the extent of their effect. This is also applicable where these events occur at a time when the contracting partner concerned is in default, unless the delay is caused intentionally or gross negligently. The contracting partners are obliged, so far as is reasonable, to provide the necessary information immediately and in good faith to adjust their obligations to the changed conditions.

Place of performance, place of jurisdiction and applicable law

56. Unless otherwise indicated in the order confirmation, the place of performance is our principal place of business.

57. The place of jurisdiction for all legal disputes, including any action relating to payment bills of exchange or cheques, is our principal place of business. We are also entitled to bring an action at the place of business of the partner.

58. The contractual relationship is exclusively subject to the laws of the Federal Republic of Germany. Application of the United Nations Convention on Contracts for the International Sale of Goods of 11. April 1980 (CISG – „Vienna Sales Convention“) is excluded.
